PROJECTS

Hospital Management System

A real-time full-stack web application developed to streamline hospital operations and improve patient management. The system includes patient registration, appointment booking, doctor management, medical records, billing, and admin dashboards. Built using Python and Django for the backend with REST APIs, and React.js for the frontend. Successfully deployed the project with integrated frontend, backend, and database connectivity. Focused on responsive UI, secure authentication, and efficient data management.

✓ Deployed

E-commerce Website

A modern full-stack e-commerce platform developed for online product browsing and purchasing. The application features user authentication, product listings, shopping cart functionality, order management, and responsive user interfaces. Implemented backend APIs using Django and developed an interactive frontend using React.js. Focused on performance, clean UI design, and seamless user experience.

INTERNSHIP

Full Stack Python Developer Intern – Vybog, Chennai

Duration: 2 Months

Worked on existing web applications and websites using Python, Django, React.js, and MySQL. Contributed to debugging, fixing application errors, improving performance, and maintaining frontend and backend functionalities. Collaborated with the development team to enhance user experience, resolve technical issues, and support ongoing project development. Gained hands-on experience in real-world software development workflows, REST APIs, version control using Git, and Agile development practices.
